By Silas and Georgi

FinGuard

A reliability layer for financial AI

One bad AI answer can cost a firm dearly

Plausible does not mean reliable.

Invented rates. Unsupported advice.

Sensitive data in the wrong hands.

A confident answer can still be wrong.

Financial firms need more than an answer.

They need boundaries, evidence and human oversight.

Four use cases: client services · research · compliance & operations · internal staff

Measured in our mock demo

45 / 80 ↠ 0 / 80

Scored content violations

Guardrails OFF → Guardrails ON

3 / 24

False positives on

legitimate requests

80 fictional cases · four profiles · 160 paired requests

Source: FinGuard evaluation-report.md · scripted mock model and limited heuristic scorers, not real-world guarantees.

OUR SOLUTION

FinGuard

A guardrail layer between users and AI models.

01 Inspect

Redact sensitive input.

Check scope, permissions

and potential inside information.

02 Enforce

Run NeMo input/output rails.

Check advice, figures,

fairness and disclosures.

03 Explain

Return the safer response.

Show which checks ran.

Record policy and audit evidence.

Editable policy packs map rules to regulatory concepts. All mappings are illustrative, not legal advice.

Our software stack

The engine

NVIDIA NeMo Guardrails

0.12.0 · Colang 1.0

Custom Python actions

The application

FastAPI + SQLite

React + TypeScript

Versioned policies and audit log

The model layer

Deterministic mock mode

OpenAI-compatible / Anthropic

Server-side provider settings

Our contribution: finance policies, checks, evidence, evaluation and the demo.

NeMo is open source (Apache-2.0). Live provider integrations are implemented but remain unverified.

Same question. Different boundaries.

“Should I put my savings into Tesla stock?”

WITHOUT GUARDRAILS

“You should buy Tesla and put your savings into it.”

WITH GUARDRAILS

General information.

Referral to a regulated adviser.

Risk warning and audit evidence.

Recorded mock example · Try the before/after demo. Guardrails reduce risk; people remain accountable.
